

2301T-F Electrode

Main Features

- Unique BPB (Brush-resistant Platinum Black) electrode technology delivers maximum accuracy across a wide measuring range
- Platinum black coating minimizes polarization, extends the measuring range, and maintains high accuracy
- Can be cleaned with a soft brush
- Removable storage cap prevents drying out
- No temperature sensor
- ATC requires a separate temperature probe or manual temperature entry
- Compatible with all conductivity meters with a BNC connector

Technical Parameters

Measuring range	0 to 200 mS/cm, 0 to 50°C	Cell constant	K = 1,0
Shaft material	POM	Connector	BNC/RCA
Temperature sensor	30 kΩ thermistor	Cable	1 m
Recommended operating temperature	(0 ~ 80)°C	Electrode dimensions	(Ø12×155) mm
